

WHITE / GREY / BLACK SURFACERS

PERFORMANCE AND VERSATILITY

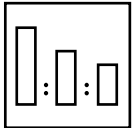

Surfacers are of paramount importance in the car repair process. To assist in improving opacity the colours that make up the range are black, white and grey. Additionally, they can be mixed together up to 50% to obtain light grey and dark grey tones. By doing so, the surfacer tone will surpass your expectations while saving on colour consumption.

HS SURFACER WET ON WET

The sanding version will provide the correct grey tone, excellent particle thickness and easy sanding thanks to its smooth and silky finish. The wet-on-wet version guarantees improved process times even on the most demanding repairs.

As a manufacturer we have a responsibility for the environment and being eco-friendly. All of our products meet the latest European legislation and provide optimum performance.
