

HIDROSONNE EVO

THE HEART OF THE SYSTEM

Colour is life. Hidrosonne Evo has perfected its colour mixing system. This has been developed to obtain colours with exacting reproduction qualities, high opacity and exceptional durability.

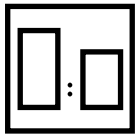

The Hidrosonne Evo system contains an extensive range which is updated regularly when new colours are available to the market from the vehicle manufacturers.

In order to meet European legislation, Hidrosonne Evo offers a modern water-based system that complies with these regulations. This is manufactured to high quality standards and a solvent content in keeping with regulations. This ensures a system that follows the guidelines of 420grams per litre.

The Hidrosonne Evo system offers world class technology, outstanding coverage and durability. It is fully VOC compliant water borne basecoat system comprised of 64 tinters, including metallics, pearls and xirallics.

The Hidrosonne Evo system has been created to offer the repairer an alternative for the UK refinish market, allowing for greater choice and control of costs, leading to an increase in profitability.
